Education

UNED **May 2013 – October 2015**
Bachelor's degree in Computer Science *Heredia, Costa Rica*

Summary

Software Engineer with 10+ years of experience building and scaling production systems for U.S. clients in remote, cross-functional teams. Strong backend and cloud background, with hands-on experience designing APIs, data models, and serverless architectures on AWS. Proven ability to own features end-to-end, improve system performance, and deliver reliable solutions in high-impact, real-world environments.

Experience

Freelance Software Engineer **November 2023 – present**
Full-Stack Developer *Costa Rica (Remote)*

- **Time Management App (TimeIn)**: Sole developer of a full-stack web application used by CCK, built from scratch with Next.js and backend services, improving team productivity and workflow management. Implemented authentication, reporting, and task tracking features; deployed and maintained the app on Vercel.
- **Online Car Marketplace**: Architected and developed the frontend with Next.js. Project discontinued, but demonstrates full-stack skills and system design.

Gorillla Logic **March 2019 – November 2022**
Web Developer / Senior Consultant (Promoted in 2021) *Costa Rica (Remote / Nearshore)*

- Develop and maintained two full-stack web applications for the Zero to Three (ZTT) project, including an internal operations tool and a case management system supporting vulnerable children at risk of abuse or malnutrition.
- Optimized report queries (PostgreSQL/DynamoDB), improving load times by 30% and enhancing overall system efficiency.
- Conducted code reviews, recommended tools, and implemented best practices, improving code quality and team workflow.
- Built frontend interfaces using React, Material UI, and Redux; developed backend services with NodeJS, Express, and Serverless on AWS, ensuring scalable and maintainable systems.

First Factory **January 2018 – March 2019**
Software Engineer *Costa Rica (Remote / Nearshore)*

- Developed key features for an innovative app for the International Centre for Missing & Exploited Children (ICMEC) using React and Node.js, improving data collection and analysis for missing children cases.
- Implemented facial recognition workflows using AWS Rekognition, S3, DynamoDB, and Lambdas, helping identify leads in ongoing investigations
- Integrated Elasticsearch for efficient data retrieval, enabling faster searches and improving system scalability.

Fiserv **September 2013 – December 2015**
Software Developer *Costa Rica*

- Developed and enhanced the mobile banking web platform for U.S. banks, contributing to key features that improved usability and transaction reliability, using ASP.NET, `C#`, MVC4, JavaScript, SQL Server, HTML, and CSS.
- Collaborated with a distributed team to implement features aligned with global standards and project deadlines.

Projects

Games Collection | *React, Node.js, MySQL, Vercel* **December 2025**

- Built a full-stack web application from scratch to organize and track a personal game collection, deployed on Vercel.
- Designed and implemented frontend with React and backend with Node.js, creating a seamless user experience and efficient data management with MySQL.
- Managed the full project lifecycle, from concept sketches to deployment, demonstrating end-to-end development skills and continuous learning.

Technical Skills

Languages: JavaScript (ES6), TypeScript, `C#`, HTML5, CSS
Frameworks and Libraries: React, Next.js, Redux, Node.js, Express, Serverless Framework, TailwindCSS, Prisma
Databases: Microsoft SQL Server, PostgreSQL, MySQL, DynamoDB
Cloud and Deployment: AWS (S3, Lambda, Rekognition, Cognito), Microsoft Azure, Vercel, Render
Tools Claude Code, OpenCode, Cursor, Github Copilot, Docker, CI/CD, Git, REST APIs
